

1. DB Connection String in the keyvault - to connect postgresql

a. DBConnectionString

2. Super admin credentials in keyvault

a. SuperAdminEmail : superadmin@gmail.com

b. SuperAdminEmail: <strong password>

3. In app settings file

```
"EmailSettings":{  
    "SenderEmail": "",  
    "AppPassword": ""  
},
```

- Make sure configure the email id and app password for the email service (which act as centralized email)

4. New Admin Creation

- Super admin has a rights to create a new admin with their login credentials stored in the key vault
- <http://localhost:4200/login-super-admin>
- For security purpose, does not maintain the session for the super admin
- Password is a auto generated can't edit
- Make sure the gmail credentials valid before that

Note: Use a original gmail id for the users, because as it send the real time emails to the users
