

- Enabled the Static webpage option in blob

The screenshot shows the 'Static website' configuration page in the Azure portal. The left sidebar lists various storage and management options, with 'Static website' selected. The main content area displays the configuration for the static website, including the primary and secondary endpoints, index document name, and error document path. A notification banner at the top indicates that the static website is enabled.

Enabling static websites on the blob service allows you to host static content. Webpages may include static content and client-side scripts. Server-side scripting is not supported. As data is replicated asynchronously from primary to secondary regions, files at the secondary endpoint may not be immediately available or in sync with files at the primary endpoint. [Learn more](#)

Static website

Disabled **Enabled**

An Azure Storage container has been created to host your static website.

[\\$web](#)

Improve the page load time of your static website by using the caching features of Azure Front Door (Additional costs apply). [Azure Front Door](#)

Primary endpoint: <https://myblobkavin.z13.web.core.windows.net/>

Secondary endpoint: <https://myblobkavin-secondary.z13.web.core.windows.net/>

Index document name: [index.html](#)

Error document path: [index.html](#)
